How to Make Your Band Sound Like an Organ

79th Midwest International Band and Orchestra Clinic
Dec. 19th, 2025
W183 McCormick Place, Chicago, IL

Keysto Stotz
Skiatook High School Band (OK)

About Us.... *and why this topic?*

- Band directors at Skiatook Schools
- Small School Band, Oklahoma 4A (less than 650 grades 9-12)
- BME - University of Tulsa
- MM Instrumental Conducting - Wichita State University
- Amateur Organist

About Us.... *and why this topic?*

How many times have we told our bands or students that we want them, or a certain passage, “to sound like an organ”?

Well, organists are baffled by this comment and ask,

“What in the world do they mean by THAT?”

About the Pipe Organ

- The pipe organ is known as *The King of Instruments*.
- It is one of the oldest instruments.
- It is the largest wind instrument.
- Modern organs use constant and consistent air controlled electronically by a wind box.

About the Pipe Organ

- A pipe organ consists of both wood and metal pipes. Some pipes could be as large as 40 feet tall, while others are the size of a pencil.
- Organs have multiple manuals, or keyboards, and various stops to facilitate changes and movements between pre-set registrations. Pulling a stop, or knob, allows the air to enter the pipe at a constant speed.

Limitations

- Organs are **equally tempered**, meaning the 12 notes in the chromatic scale are divided equally in pitch, so there is *no opportunity to adjust pitch* like other wind instruments.
- They also have *no ability to crescendo or decrescendo*.
- However, there is a pedal to add more stops and shutters to mute and soften notes, but they do not have the same effect.

Limitations

- The achievement of a “legato” style is extremely different and harder to achieve on the organ.
- The sound of each individual organ is dictated by the hall or space it occupies.

Comparisons

- Organists can give **immediate color shifts** by changing manuals, or keyboards.
- Organs have the ability to have **constant and perfectly regulated air flow**.
- Furthermore, **attacks and releases are precise** everytime due to the mechanics of the instrument.

What Do We Want To Imitate?

- The idea of **constant and consistent air** is one of the most basic and difficult fundamentals we teach our students.
- **Precise and clean attacks**, as well as **releases of notes**.
- Vertical alignment is easier on the organ because it is played by a soloist.
- Organists have to think Horizontally, not Vertically.

What Do We Want To Imitate?

- The **quick changes in color and instrumentation**, *while maintaining pitch.*
- Above all, we want to *imitate the overall sound of a pipe organ*, which is achieved by **creating resonance in the space** with **perfect balance and pitch.**

Rules of the Chorale

- Suspensions are Money (\$)
- Repeated notes are not the main focus
- Non-Chord Tones are Hard!
- Think Horizontally

1. Suspensions are Money \$\$\$

- Determine whether the tie across the bar (to the same note) is the **root or fifth** of a chord, or if its an extension.
 - (7th, 9th, 11th, 13th, etc.)
- **Roots and fifths** need to be **perfectly in tune**, and do not adjust as much on the second chord.
- This is usually a note we play ad nauseum (Bb, F, Eb) and students should be comfortable on those pitches.

Bach and Before for Band by David Newell - Chorale no. 4 m 14-16

Handwritten musical score for "Bach and Before for Band" by David Newell, Chorale no. 4, measures 14-16. The score is written on four staves. The first staff is for flutes, the second for clarinets, and the third for bassoons. The fourth staff is for the bass line. Measures 14 and 15 are highlighted in yellow. The score includes various musical notations such as notes, rests, and dynamic markings. The word "flutes" is written above the first staff, "clarinets" above the second, and "B.C." (Bassoon) above the third. The bass line is marked with "B.C." and "Bb".

1. Suspensions are Money \$\$\$

- Often, it is our lower chair players that have these notes.
- Take care to give them confidence, don't neglect them.
- If the suspension is an extension, determine what type and tell the player(s) to adjust the pitch accordingly on the second chord.

Three Ayres from Gloucester - II "Eventide" by Hugh Stuart (m 99-115)

Ab Bb7 Eb9 Cm9 Fm9 Bb9 Eb9 Ab9

1. Suspensions are Money \$\$\$

- All suspensions need to have full duration.
- There is nothing worse than a chord not resolving the way it should because of timid players.
- Organists have the luxury of keeping their finger down on the note.

Many times I was chastised in lessons for breaking a tie.

2. Repeated Notes are not the Main Focus

- Tell students that EVERY NOTE they play has a **function and role**.
- Even if its a single note in a grouping of nine, or the same note 20 times in a row.
- Always ask, “**What’s my role on this note?**”

2. Repeated Notes are not the Main Focus

- MOST repeated notes are not outside the triad of the underlying chord, again, probably **roots or fifths**.
- They need to be **locked in on pitch**, not worrying about adjusting to everyone around them.
- The first time they are important
- They are there for the band to **listen down to them**.

2. Repeated Notes are not the Main Focus

- If repeated notes are too loud, there is no clarity.
- Chords will not resonate without good balance throughout.
- An organist would recognize these pitches and put them on a different registration or manual (or both) to adjust balance.
- Think of a pedal being played by your foot (toe or heel)

The first system of the musical score for 'The Little Boat' consists of two staves. The top staff is a treble clef with a key signature of one sharp (F#). The bottom staff is a bass clef. The melody is written in the top staff, starting on a whole note G4, followed by a half note A4, a quarter note B4, and a quarter note C5. The bass staff provides a simple accompaniment with a whole note G3, a half note F3, and a quarter note E3. The system ends with a double bar line.

Handwritten musical score for "The Rose Tree". The score is written on ten staves. The first two staves contain the vocal melody, starting with a treble clef and a key signature of one sharp (F#). The remaining eight staves contain the piano accompaniment, with the first four staves using a bass clef and the last four staves using a treble clef. The piano part consists of a steady eighth-note accompaniment. The score is divided into four measures by vertical bar lines. The first measure is marked *mf* (mezzo-forte). The second measure is marked **F** (forte). The third measure is marked **B** (basso). The fourth measure is marked **F** (forte). The score ends with a double bar line.

Sexes

3. Non Chord Tones are Hard!

- They just are. Any notes that are not part of the main chord (that you work everyday usually) might not be the hardest when it comes to technique, but your students need direction on what to do with them.
- The further we depart from the fundamental notes we are familiar with, the more you have to rely on the ears of your students and players to be confident and in tune.

3. Non Chord Tones are Hard!

- Take time and isolate the players or instrument groups that have the main chord and slowly add the non chord tone players so they will know who to listen to.
- Have students mark their tuning tendencies on each one of those notes.
- Confidence is key, players need to know to play each note with the confidence to know how they fit into the ensemble.

The image shows a handwritten musical score for 'Chorale and Alleluia' by Howard Hanson. The score is written on multiple staves, with some sections highlighted in yellow and others circled in red. The notation includes various musical symbols such as notes, rests, and bar lines. The score is divided into three main sections by vertical bar lines. The first section on the left has several staves of music. The middle section has two staves, with the top staff featuring a yellow highlight and the bottom staff featuring a red circle. The right section has two staves, with the top staff featuring a yellow highlight and the bottom staff featuring a red circle. The notation is in a style that appears to be from the early 20th century, with some handwritten annotations and markings.

Turn Turn
 $E\Delta 7$ $E\Delta 7(-3)$ → E $F\Delta m$ $G\Delta 7$
 $\sim B''$ $G\Delta m$ (Am)

4. Think Horizontally

- Not only do we need to think about vertical alignment, but sometimes we need to think about what's going on with the x-axis of the music, the shape of the line.
- Without the ability to naturally crescendo or decrescendo, organists have to rely on 'agogic' or time accents for emphasis.

4. Think Horizontally

- Each note has the same air, making for a rich full sound no matter how long or brief a note is.
- Whenever appropriate, keep the shape of the line full, constant, and resonant. Shifts in instrumentation and color need to be seamless and full of confidence, just like if you were to switch from one manual to another.

How would the opening statement of Holst's First Suite sound if every note was approached like a singer?

Passacaglia and Fugue in C minor by J.S. Bach arr. Hunsberger (m.1-8)

Conclusions

- Consistent air, like billows or wind chest.
- Seamless color shifts. (Instrumentation)
- Room for greater interpretation of dynamics.
- Importance of Inner parts. All notes sound at the same volume on the keyboard.
- Exposure to Great Literature. (historic)
